SUMMARY

DevOps Engineer with 4+ years running production Kubernetes for an 18-microservice, consumer-facing booking platform on AWS. Cut incident resolution time from 50 to 18 minutes through symptom-based alerting. Built AI-assisted automation spanning PR review across 30 repositories and a policy-gated EKS remediation pipeline.

EXPERIENCE

DevOps Engineer | Hyatt Hotels Corporation | Remote

Jan 2024 — Present

- Scaled EKS infrastructure for a consumer-facing booking platform from 8 to 24 nodes (250 to 600 pods) during peak promotions while holding sub-second API latency.
- Standardized GitOps delivery for 18 microservices with GitHub Actions and ArgoCD, automating builds, security checks, Helm deployments, and canary/blue-green releases.
- Replaced all-at-once Lambda releases with gated canary deployments using CodeDeploy and CloudWatch, automatically rolling back releases when error rates increased.
- Reduced incident resolution time from 50 to 18 minutes by redesigning Prometheus and CloudWatch alerts around customer-facing symptoms and linking them to service-specific runbooks.
- Automated container vulnerability response with Amazon Inspector, EventBridge, and Lambda, routing Critical/High findings directly to Slack for developer response.
- Automated PR review across 30 repositories with a Claude Code agent that validates Jira requirements and detects exposed secrets before merge, flagging issues for developer review.
- Personal project: built a policy-gated EKS remediation pipeline (EventBridge, Lambda) that diagnoses CloudWatch alarm incidents and, for a narrow allow-listed set of failure types, automatically restarts the affected workload or scales the node group; validated end-to-end against real alarm fixtures.

Cloud Engineer | HelloFresh | Remote

May 2022 — Jan 2024

- Standardized infrastructure across 10 AWS environments by developing reusable Terraform and CloudFormation modules for repeatable provisioning and configuration.
- Hardened AWS access for 25 developers by implementing least-privilege IAM policies scoped to role-specific responsibilities.
- Implemented AWS VPC networking across subnets, NACLs, and bastion hosts for isolated, secure cross-environment access.
- Automated dev/staging resource scheduling to eliminate idle non-production spend.

SKILLS

Cloud & Infrastructure:	AWS, EKS, Lambda, EventBridge, VPC, IAM, Terraform, CloudFormation
Kubernetes & GitOps:	Kubernetes, ArgoCD, Helm, Docker
CI/CD & Delivery:	GitHub Actions, Git, AWS CodeDeploy, Jira
Observability & Reliability:	Prometheus, CloudWatch, EFK, Alerting, Incident Response, Runbooks
Security:	Amazon Inspector, IAM, Container Security, Vulnerability Management
AI-Assisted Engineering:	Claude Code, Agentic AI Workflows, Prompt Engineering
Scripting:	Python, Bash

EDUCATION & CERTIFICATIONS

- CKA — Certified Kubernetes Administrator — 2024
- CKAD — Certified Kubernetes Application Developer — 2023
- HashiCorp Certified: Terraform Associate (004) — 2026
- Master's Degree in Social Work | Ion Creangă State Pedagogical University, Chisinau — 2014
